These food substances taste **bitter**. Some change the colour of a red litmus paper to blue. They are alkaline.

At night, you can see many glittering objects in the sky. These objects are called stars. A group of stars that form a **pattern** is called a **constellation**. Examples of constellations are Orion, Scorpion, Big Dipper and Southern Cross.

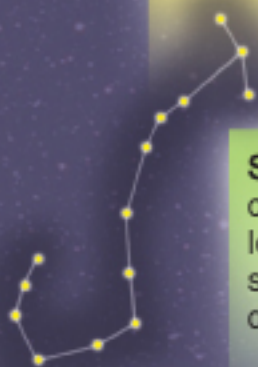

**Southern Cross** can be seen as a brilliant cross in the southern sky. Southern Cross shows the South Pole.

**Big Dipper** is a group of seven bright stars that forms a pattern of a handle and a bowl. Orion and Big Dipper show the North Pole.

North

Big Dipper and Southern Cross can be seen between April and June.

**Scorpion** can be seen clearly with its head, long body, tail and stinger between June and August.

**Orion** can be seen clearly as a hunter with a belt and sword between December and February.

North

Travellers used constellations in the sky to guide them for **directions**. Farmers used constellations to remind them of planting and harvesting seasons.
